***Reasons for Allowance***

1. Claims 1-30 are allowed.
2. The following is an examiner's statement of reasons for allowance:

While Chen (U.S. Patent No. 6,654,610) discloses a technique for implementing a two-way packet data protocol (PDP) for bidirectional QoS negotiation and control in a Universal Mobile Telecommunication System (UMTS) network. The UMTS network includes a terminal equipment that is connected to a mobile terminal which connects to a UTRAN via a radio interface. The UTRAN is further connected to a core network formed by a Gateway and a CN EDGE, wherein the Gateway can communicate with external network. Chen does not teach the mobile terminal setting the second level communication session parameters in accordance with the transmitted identity including initiating modification of communication channel parameters based on identity of the second network element; and other limitations related to these features in combination with the remaining elements and features of the claimed invention.

And Widegren (U.S. Patent No. 6,621,793) discloses a method of filtering and gating data flow in a QoS connection between a remote host and user equipment in a packet data network using policy control mechanisms includes a remote host initiating an application in an application server and a corresponding session between the remote host and the user equipment via the application server. Widegren does not teach setting a second level communication session parameters in accordance with the transmitted identity including initiating modification of communication channel parameters based on identity of the second network element; and other limitations related to these features in combination with the remaining elements and features of the claimed invention.

Art Unit: 2121

Neither of these references taken either alone or in combination discloses a method and device for providing an announcement in a communication network having all the claimed features of applicant's instant invention, specifically including: setting up a second level communication between the first network element and the communication network in accordance with the transmitted identity of the second network element in which the second network element plays the announcement to the first network element. Also, there is no motivation to combine the Chen reference with the Widegren reference to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
